Hi Alex,

I have 2 sites that need some work and I wanted to verify that GA EPD did not have enough flexibility on the workplan to do the work. Both are in Atlanta. I don't want to task work to a contractor till I know EPD isn't available.

These are:

- 1) PSA with sampling at the former Pullman facility on Rogers St (Kirkwood).
- 2) PA/SI at the former Metalico-Evans site (Morningside/Ansley). The PSA scored but was borderline in what was found there with the XRF. However, since they had already had a removal there, there is no data on nearby residential properties, and there is media interest, I feel EPA should err on the conservative side.

Let me know if you have any questions.

Thanks,

Donna K. Seadler
